

VARIABLE SPEED MOTOR TWO-STAGE HEAT STAINLESS STEEL HEAT EXCHANGERS

# **95% Efficient Gas Furnace**

Featuring Two-Stage Heat, Variable Speed Motor and Stainless Steel Primary Heat Exchanger

## A decision you will be comfortable with

Two-Stage Heat: Reduces temperature swings with longer, gentler heat cycles by running at low capacity during mild weather, saving you fuel and money. The furnace automatically switches over to full capacity to keep you warm on colder days.

COMFORT

Variable Speed Blower: The variable speed motor delivers even air flow for the ultimate in comfort and humidity control. Humidity in the home can be controlled actively with a "humidity control" featured thermostat or programmed into the furnace control board to passively remove additional moisture when used with an adjoining central cooling system.

## We set the new standard for durability

**Primary and Secondary Stainless Steel Heat Exchangers:** Reliable, corrosion resistant, and guaranteed for the life of your furnace.

**Clamshell Heat Exchanger:** Designed to provide quiet start-up and even temperatures. **100% Run-Tested in Factory:** Each unit undergoes a thorough, rigorous inspection and performance test before leaving the factory.

#### Just listen to how quiet it is

Variable Speed Blower: Motor ramps up and down slowly as needed, providing extremely quiet operation.

Insulated Cabinet: Reduces the noise from the motor while preventing loss of warm air. Anti-Vibration Blower Assembly: Reduces noise typically associated with starts and stops. Quiet Combustion Technology: Allows the burners to operate at a lower firing rate which reduces noise while the furnace is running.

## Save energy and save money

**95% AFUE\* Rating:** The higher the AFUE rating, the more you will save on energy costs. If you have an older model furnace, you could save significantly on your energy bills by upgrading to a new, higher AFUE rated unit.\*\*

SAVINGS

## You deserve the credit

This high-efficiency model is eligible for U.S. tax credits. Please visit <u>www.energystar.gov</u> for additional details. This unit is also eligible for the ecoENERY program in Canada. Please visit <u>www.armstrongair.com/cagrant</u>

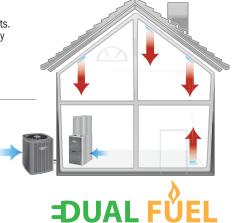

\* Annual Fuel Utilization Efficiency (AFUE) is a measure of a furnace's efficiency and performance. The higher the AFUE rating, the lower your fuel costs. Typical furnace ratings range from 80% to 96%.

 $\ast\ast$  Savings vary depending on use, geography, lifestyle, maintenance, installation and other factors.

Warranty applies to residential applications only. See full warranty at www.alliedair.com for terms, conditions and exclusions.

Uses efficient balance between two energy sources: A Heat Pump & A Furnace

Each of our Furnaces are built to be compatible as a Dual Fuel system - giving you more opportunities for energy efficiency and saving money.
